Breed: West Highland White Terrier

Sample data

VHL_ID: H531986
Test ID-nr: 527165 1
Material: Swab

Sampling: Sampling witness statement attached.

H312 - Craniomandibular Osteopathy (CMO) - Date of test: 17.01.2022

Testresult: NORMAL

D. Mioch, MSc Veterinary Medicine
CEO

H312 - Craniomandibular Osteopathy (CMO)

Explanation about the result:

NORMAL: The animal has two healthy alleles. When used in breeding, this animal will not become ill due to the DNA variant (mutation) tested. It cannot spread the DNA variant in the population.

CARRIER: The animal has one healthy and one mutant (disease) allele. When used in breeding, 50 percent of the offspring will receive the disease allele. Carriers have a very high risk to become ill.

AFFECTED: The animal has two mutant (disease) alleles. When used in breeding, all offspring will receive the mutant allele from this animal. Affected animals have a very high risk become ill.

VHL exercises the utmost care in performing each of its engagements. No party other than the principal may derive any rights from the results of these engagements, and the principal expressly indemnifies VHL in respect of any third-party claims. VHL policy provides that any complaints must be received within eight days of the completion of an engagement and imposes restrictions on liability. In that respect, VHL refers to its General Conditions, which are applicable to all engagements VHL performs and which were enclosed with the submission form. These General Conditions can also be reviewed at www.vhlgenetics.com. The work VHL performs is based on the material and/or data it receives from its principal. This report may only be copied in its entirety. The organization is ISO:9001 certified for all her work. This test is based on PCR technology.
